## 1-ARRAY LIST

### AIM:

Using C# Programming, develop the program, which implements the properties and methods in Array List.

### SOURCE CODE:

```
using System;
using System.Collections;

namespace ArrayClass
{
    class ArrayListeg
    {
        static void display(ArrayList array)
        {
            Console.WriteLine("Length of the Array List are {0}", array.Count);
            Console.WriteLine("Elements in an Array are ...");
            foreach(var elements in array)
            {
                Console.WriteLine(elements);
            }
        }

        static void addIndividual(ArrayList array)
        {
            Console.Write("Enter the Element to Add :");
            array.Add(Console.ReadLine());
            Console.WriteLine("Element Added Successfully");
        }

        static void addRange(ArrayList array)
        {
            Console.Write("Enter the n value :");
            int n = Convert.ToInt32(Console.ReadLine());

            Array ar = Array.CreateInstance(typeof(string), n);

            for (int i = 0; i < n; i++)
            {
                Console.Write("Enter the Values:");
                ar.SetValue(Console.ReadLine(), i);
            }

            array.AddRange(ar);
            Console.WriteLine(" Values Inserted in Array List Successfully");
        }

        static void insertElement(ArrayList array)
        {
            Console.Write("Enter the location to Insert:");
            int n = Convert.ToInt32(Console.ReadLine());
            if (n > array.Count)
            {
                Console.WriteLine("Not Sufficient Space to Insert :");
            }
        }
    }
}
```

```

    }

file:///C:/Users/Dr.PV.Praveen Sundar/documents/visual studio 2010/Projects/ArrayClass/ArrayClass/bin/Debug/ArrayClass.EXE
1- Add Individual Elements
2- Add Range of Elements
3- Insert Elements individually
4- Insert Range of Elements
5- Remove Individual Element
6- Remove Range of Elements
7- Remove Element at Location
8- Sort Elements
9- Reverse the Elements
10- Search
11- Clear the list
12- Duplicate the list
13- Index of Element
14- Display
15- Exit
14
Length of the Array List are 0
Elements in an Array are ...
```

The screenshot shows a Windows command-line interface window. The title bar reads "file:///C:/Users/Dr.PV.Praveen Sundar/documents/visual studio 2010/Projects/ArrayClass/ArrayClass/bin/Debug/ArrayClass.EXE". The window contains a list of 15 numbered options:

- 1- Add Individual Elements
- 2- Add Range of Elements
- 3- Insert Elements individually
- 4- Insert Range of Elements
- 5- Remove Individual Element
- 6- Remove Range of Elements
- 7- Remove Element at Location
- 8- Sort Elements
- 9- Reverse the Elements
- 10- Search
- 11- Clear the list
- 12- Duplicate the list
- 13- Index of Element
- 14- Display
- 15- Exit

A small horizontal bar with a minus sign is visible below the menu.

### **RESULT:**

Thus, Array list and its methods are implemented successfully.

## 2- INHERITANCE

### AIM:

Using C# programming, implementing the concept of Single Inheritance, Multilevel inheritance and Hierarchical inheritance.

### SOURCE CODE:

```
using System;

namespace Inheritance
{
    class baseclass
    {
        int regno; String Name; String Course;
        public baseclass(int rno, String name, String course)
        {
            this.regno = rno;
            this.Name = name;
            this.Course = course;
        }
        public void Display()
        {
            Console.WriteLine("\n Name : {0}", Name);
            Console.WriteLine("\n Reg No : {0}", regno);
            Console.WriteLine("\n Course : {0}", Course);
        }
    }
    class marks : baseclass
    {
        int mark1, mark2, mark3, mark4, mark5, tot;
        public marks(int rno, String name, String course, int m1, int m2, int m3, int m4, int m5)
            : base(rno, name, course)
        {
            this.mark1 = m1;
            this.mark2 = m2;
            this.mark3 = m3;
            this.mark4 = m4;
            this.mark5 = m5;
            tot = mark1 + mark2 + mark3 + mark4 + mark5;
        }
        public void Output()
        {
            Display();
            Console.WriteLine("\n Subject 1 Marks : {0}", mark1);

## RESULT:

Thus, Single Inheritance, Multi level Inheritance and Hierarchical Inheritance is implemented, the desired output is executed successfully.

### 3-IMPLEMENTATION OF INTERFACE IN OOPS

**AIM:**

Using C# Programming, develop the program, which implements the Concept of Interface.

**SOURCE CODE:**

```

using System;

namespace Labexercise_6
{
    class Shapes
    {
        public const float PI = 3.14159f;
        public const double e = 2.71828f;
        public void Area()
        {
            Console.WriteLine(" Area and Volume of the Shapes is differ from one
object to another");
        }
    }
    interface Square
    {
        int Area(int a); // a*a
        int Volume(int s); // s*s*s
    }
    interface Circle
    {
        double Area(int r); // πr2
        double Volume(int r); // 4/3 * πr3
    }
    interface Rectangle
    {
        double Area(int l, int w); // area= l*w;
        double Volume(int l, int b, int h); //Volume= l*b*h;
    }
    class Program : Shapes, Square, Circle, Rectangle
    {
        int Square.Area(int a)
        {
            return (a * a);
        }
        int Square.Volume(int s)
        {
            return (s * s * s);
        }
        double Circle.Area(int r)
        {
            return (Shapes.PI * r * r);
        }
        double Circle.Volume(int r)
        {
            return ((4 / 3) * Shapes.PI * r * r * r);
        }
        public double Area(int l, int w)
        {
            return (l * w);
        }
    }
}

```

```

public double Volume(int l, int b, int h)
{
    return (l * b * h);
}
static void Main(string[] args)
{

    int ch;
    do
    {
        Console.WriteLine("\t 1- Shapes ");
        Console.WriteLine("\t 2- Square ");

### **RESULT:**

Thus, Concept of Interface is implemented successfully.

## 4- IMPLEMENTATION OF DELEGATES AND EVENTS

### AIM:

Using C# Programming, develop the program, which implements the delegates for Simple arithmetic operations, Also create an events for following conditions (1- If the resultant value is negative value and resultant value is more than 25000.

### SOURCE CODE:

```

using System;

public delegate float Calculator(float x, float y);

namespace Delegateeg
{
    class Delegateandevents
    {
        public delegate void dg_Num();
        public event dg_Num ev_negativeNumber;
        public event dg_Num ev_maxNumber;
        public float AddNum(float p, float q)
        {
            float result = p + q;
            if (result < 0)
            {
                ev_negativeNumber();
                return (0.0f);
            }
            if (result > 25000)
            {
                ev_maxNumber();
                return (0.0f);
            }
            return (result);
        }
        public float SubNum(float p, float q)
        {
            float result = p - q;
            if (result < 0)
            {
                ev_negativeNumber();
                return (0.0f);
            }
            if (result > 25000)
            {
                ev_maxNumber();
                return (0.0f);
            }
            return (result);
        }
        public float MultNum(float p, float q)
        {
            float result = p * q;
            if (result < 0)
            {
                ev_negativeNumber();
                return (0.0f);
            }
        }
    }
}

```

```

Division of Two Numbers are :0.8
```

### **RESULT:**

Thus, Delegates and events in C# is executed successfully.

## 5- EXCEPTION HANDLING

### **AIM:**

Using C# Programming, develop the program, which handles various exceptions supported in C#

### **SOURCE CODE:**

```

using System;
using System.Linq;
namespace Exception_Handling
{
    class lab5
    {
        int[] array= new int[5];
        int i=0,n;
        float avg;
        public lab5()
        {
            int value;
            try
            {
                Console.WriteLine(" Enter the N value:");
                n = int.Parse(Console.ReadLine());
                for (i = 0; i < n; )
                {

                    Console.WriteLine("Enter the Value [{0}] :", i);
                    value = int.Parse(Console.ReadLine());
                    if (value < 0)
                    {
                        throw new userDefinedException(" Only Positive values in Array
Exception");
                    }
                    array[i++] = value;
                }
                avg = array.Sum() / n;
                Display();
            }
            catch (OverflowException oe)
            {
                Console.WriteLine(" Overflow Exception:- " + oe.Message);
            }
            catch (IndexOutOfRangeException ie)
            {
                Console.WriteLine(" Index maybe Overflow or Underflow:-" +
ie.Message);

Enter the N value:5
Enter the Value [0] :10
Enter the Value [1] :20.12
Format Exception :-Input string was not in a correct format.
```

```
file:///C:/Users/Dr.PV.Praveen Sundar/documents/visual studio 2010/Projects/Exception Handling/Exception Handling/bin/Debug/Ex... - X
Enter the N value:5
Enter the Value [0] :10
Enter the Value [1] :20
Enter the Value [2] :30
Enter the Value [3] :-10
User defined Exception :- Only Positive values in Array Exception
```

The screenshot shows a black terminal window with white text. At the top, it displays the path: file:///C:/Users/Dr.PV.Praveen Sundar/documents/visual studio 2010/Projects/Exception Handling/Exception Handling/bin/Debug/Ex... . Below this, there are two lines of output: "Enter the N value:0" and "General Exception :- Attempted to divide by zero." The window has standard operating system controls (minimize, maximize, close) at the top right.

**RESULT:**

Thus, Exceptions are handled in C# program successfully.

## 6- SIMPLE CALCULATOR

### **AIM:**

Create a simple calculator using form fields in VB.Net. The form contains two fields for number entry & one field for the result. Allow the user to be able to use plus, minus, multiply and divide.

### **SOURCE CODE:**

```

Public Class frm_Calc

    Dim value1, value2, result As Double
    Private Sub btn_add_Click(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles btn_add.Click

        If txt_first.Text.Length > 0 Then
            If txt_second.Text.Length > 0 Then
                Try
                    value1 = CDbl(txt_first.Text)
                    value2 = CDbl(txt_second.Text)
                    result = value1 + value2
                    txt_result.Text = result.ToString()
                Catch ex As Exception
                    MessageBox.Show("Invalid input " + ex.Message, "Simple
Calculator")

## **OUTPUT:**

A screenshot of a Windows application window titled "Employee Payroll Details - [Employee Details]". The window has a standard title bar with minimize, maximize, and close buttons. Below the title bar is a menu bar with "Forms" selected. The main content area is titled "Employee Details". It contains five input fields: "Employee No" (with value "0"), "Employee No" (empty), "Name" (empty), "Designation" (empty), and "Basic Salary" (empty). To the right of these fields is a data grid table with columns: emp\_no, emp\_name, design, and basic\_sal. The table contains six rows of data. The first row (emp\_no 21312) is highlighted with a blue background. The data is as follows:

emp_no	emp_name	design	basic_sal
21312	Sundar	Doctor	300000
21313	Bhavana	Engineer	130000
21314	Kirthiga	Software Engineer	225000
21315	Rajesh	Data Analyst	200000
21316	Sankarraj	Executive Officer	350000
*			

At the bottom left are buttons: Add, Delete, Update (highlighted in blue), and Clear.

Employee Payroll Details - [Payroll]

Forms

## Payroll Details

Employee No	21314	Name	Kiruthiga
Basic Salary	225000	Gross Salary	263250
House Rent Allowance	27000	PF	4500
Travelling Allowance	6750	Insurance	11250
Medical Claim	22500	Tax	2250

### **RESULT:**

Thus, pay slip for Employee is calculated successfully.

## 8- STUDENT MARKSHEET PROCESSING

### **AIM:**

Create a Students Information application using form fields in VB.Net. The form contains basic fields about Student profile and marks obtained, through those fields generate the marksheet for the student.

### **TABLE QUERY**

```
Create Table tbl_course (course_id Numeric(5) Identity, Course Varchar(30) UNIQUE)
```

```
Create Table tbl_Student (Stud_no Numeric (10) UNIQUE, Stud_name Varchar(50), Course Varchar(50))
```

```
Create Table stud_marks (examid Numeric(10) IDENTITY, stud_no Numeric (10) References tbl_student(stud_no), mark1 Numeric(10),mark2 Numeric(10), mark3 Numeric(10), mark4 Numeric(10),mark5 Numeric(10))
```

Adhiparasakthi College of Science was the first self-financing college started in the
year 1988. It was affiliated to Madras University till the academic year 2000 - 2001
and from the year 2001 - 2002 onwards it is affiliated to Thiruvalluvar University,
Vellore. To begin with three undergraduate courses Viz., B.Sc., Biochemistry,
Microbiology and Computer Science were offered. In the year 1993-94, the college was
upgraded as postgraduate college and started offering M.C.A., programme. From 1994-95,
M.Sc., Biochemistry and M.Sc., Applied Microbiology were added. In the year 1999-2000,
B.C.A was introduced. From 2001-2002 M.Sc., Information Technology and M.Sc., Computer
Science and technology were offered in the college. B.Com and B.B.A courses were
introduced from 2004-2005. M.Phil (Full time and part time) in Computer science,
Biochemistry and Microbiology were introduced in 2004-2005. M.Com was introduced from
2007-2008. The college has been recognized as a center for Ph.D. Programmes in
Biochemistry and Microbiology in the year 2008. B.Sc (Mathematics) course was introduced
from 2012-2013. The college has been accredited by NAAC with B++ grade from 2007 and
reaccredited with B Grade with a CGPA score of 2.83 in 2014. The college has received
permanent affiliation from the Thiruvalluvar University during 2008-2009. The College
is conferred with Autonomous status from the year 2011-2012.

The College has a total building area of 10092.97 square meters. It contains two separate
buildings for UG and PG courses with well-equipped laboratories and spacious class
rooms. There is a hygienic canteen, which provides beverages, breakfast and lunch.
Separate Hostels are available for boys and girls. The hostels provide hygienic
vegetarian food. The students enjoy a pollution free, calm and serene atmosphere.

## **OUTPUT:**

### **HOME.ASPX**

## **ABOUT.ASPX**

## COURSES.ASPX

The screenshot shows the 'COURSES' section of the website. It lists various undergraduate (U.G) and postgraduate (P.G) courses. Under U.G Courses, listed are B.B.A., B.C.A., B.Com., B.Sc., Biochemistry, B.Sc., Computer Science, B.Sc., Microbiology, and B.Sc., Mathematics. Under P.G Courses, listed are M.C.A., M.Com., M.Sc., Biochemistry, M.Sc., Applied Microbiology, M.Sc., Information Technology, and M.Sc., Mathematics. Research Programmes listed include M.Phil., Biochemistry, M.Phil., Computer Science, M.Phil., Microbiology, M.Phil., Commerce, M.Phil., Mathematics, Ph.D. in Biochemistry, Ph.D. in Microbiology, Ph.D. in Computer Science, and Ph.D. in Commerce.

## FEES STRUCTURE.ASPX

The screenshot shows the 'FEES STRUCTURES' section of the website. It displays a table of tuition fees for various courses. The table has two columns: 'Course' and 'Fees'. The data is as follows:

Course	Fees
BBA	8000
BCA	30000
B.Com	10000
B.Sc., Biochemistry	12000
B.Sc., Computer Science	30000
B.Sc., Microbiology	12000
B.Sc., Mathematics	4000
M.C.A.,	30000
M.Com	15000
M.Sc., Biochemistry	15000
M.Sc., Applied Microbiology	15000
M.Sc., Information Technology	25000
M.Sc., Mathematics	8000
M.Phil., Biochemistry	30000
M.Phil., Computer Science	50000
M.Phil., Microbiology	30000
M.Phil., Commerce	30000
M.Phil., Mathematics	30000
Ph.D. in Biochemistry	30000
Ph.D. in Microbiology	30000

## RESULT:

Thus, College information website has been created successfully.

## 10- ONLINE RECRUITMENT SYSTEM

### **AIM:**

Create an online recruitment system using ASP.Net. The website maintains two users, Admin and user. Admin can post a job and view the list of jobs posted. Whereas the user can only view the posted jobs.

### **SQL COMMANDS**

Create table **tbl\_new\_job**(Jobid Numeric(5) identity primary key, title varchar(50), description varchar(100), eligi varchar(50),location varchar(25),NoofSeats numeric(5))

```
CREATE PROCEDURE sp_Insert_job(@title NVARCHAR(50), @description NVARCHAR(100), @eligi NVARCHAR(50),@location NVARCHAR(25),@NoofSeats INT) AS
BEGIN
INSERT INTO tbl_new_job VALUES(@title,@description,@eligi,@location,@NoofSeats)
END
```

```
CREATE PROCEDURE sp_Update_job(@id INT, @title NVARCHAR(50), @description NVARCHAR(100), @eligi NVARCHAR(50),@location NVARCHAR(25),@NoofSeats INT) AS
BEGIN
UPDATE tbl_new_job SET title= @title,description=@description,eligi= @eligi,location= @location,NoofSeats= @NoofSeats where Jobid= @id
END
```

### **SOURCE CODE:**

## **OUTPUT:**

A screenshot of a Microsoft Edge browser window. The address bar shows "localhost:50609/login.aspx". The main content area features the college's logo on the left and its name "ADHIPARASAKTHI COLLEGE OF ARTS AND SCIENCE (AUTONOMOUS)" along with accreditation details in the center. On the right is another logo. Below the header is a login form with fields for "Username" and "Password" and a "Login" button.
